Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "water line passing through the cover" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

Art Unit: 3744

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over TOSHIBA AVE KK [TOSA] (JP 10103827 A) in view SONODA M [SONOI] (JP 09243237 a). TOSA discloses a cover assembly of a refrigerator 10 comprising a cover 22a for covering a machine room 22 having a water supply valve 42, the valve 42 being connected to a hose/path 48 for supplying water to a refrigerator. TOSA discloses the invention substantially as claimed as stated above. See the Fig. 1, 3 and 4 and the enclosed translation. TOSA does not disclose an opening and protection cap or cover detachably fastened to the cover opening. SONOI teaches the use of a cap 5 to cover the opening of a valve of a refrigerator for the purpose of covering and protecting the valve. See Fig. 1 and the enclosed English language abstract. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made

to modify the refrigerator of TOSA in view of SONOI such that a detachable cap could be provide in order to cover and protect the water valve.

Response to Arguments

Applicant's arguments, see remarks, filed 8/26/05, with respect to the rejection(s) of claim(s) 1-5, 7-11 under 103 have been fully considered and are not persuasive. The Applicant argued, "however, neither Sumihiro nor Sonoda discloses that the valve is connectable to a water line passing through the cover at a location adjacent to the opening covered by the cap". The Examiner disagrees. Toshiba AV KK clearly shows valve 42 is connectable to a water line 44 passing through the cover 22a. Now, regarding location of the cap. The valve 42 can be installed or rearranged in such a way that the cap can be placed over the valve and the supply line 44 can be coupled downwardly at a suitable position. There are various valve connection alternatives known in the art. In this regard water valve connection feature can be seen in US Pat. 4,543,800 to Mawby et al., US Pat. 6,161,390 to Kim. Therefore, placing a cap on the valve cover of Toshiba AVE KK in view of the teaching of Sonoda is possible. Hence, the rejections are proper.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
